

Birzum Sales Analytics — Final Project

Power BI multi-page report based on existing DWH

Author: Fatkhullakh Turakhonov

1) Business background

Company: Birzum is a multi-brand footwear & apparel retailer operating both online and through partner chains across the U.S. Its assortment covers five core product groups: Men's/Women's Apparel, Men's Street Footwear, Men's Athletic Footwear, and Women's Street Footwear.

Process analyzed: The Sales-to-Cash process from order booking through payment and fulfillment, with focus on operational sales performance and margin quality across time, retailers, geographies, and categories.

Purpose of the report: Give commercial managers and category owners a fast, reliable way to:

- Track Total Sales, Units Sold, Average Unit Price, and Operating Margin %
- Compare performance by retailer and product
- Monitor trends by date (month/quarter/year)
- Explore regional mix (state / city) and identify high-value locations
- Drill into a single retailer or product to understand mix and profitability

Primary users: Head of Commercial / Category Leads, Regional Managers, Finance BP.

Key questions answered:

- Which retailers drive the most sales and units this period?
- What products/categories are leading, and where?
- How do sales trend by month and year? Any seasonality?
- Which states and cities deliver the highest sales?
- Where are our operating margins above/below threshold?

2) Data source and model

Source: Existing DWH schemas:

- bl_dm (dimensional): dim_date, dim_customer, dim_product, dim_retailer, dim_geography, method dimensions.
- bl_3nf (normalized) used upstream for SCD2 customer and core entities (already staged into

bl_dm).

- SalesFact (fact table) with line-level sales, quantity/units, price_per_unit, and operating_profit (or margin driver fields).

Shaping & modeling (Power Query):

- Kept only needed columns; removed N/A rows.
- Built a flattened Geography query (City → State → Region).
- Created ProductDim, RetailerDim, CustomerDim.
- Added Calendar table for clean Year/Month slicing.

Relationships (star):

- SalesFact → ProductDim
- SalesFact → RetailerDim
- SalesFact → CustomerDim
- SalesFact → dim_date (via date_key)
- SalesFact → Geography

3) Measures & calculated columns

Core measures: Total Sales, Units Sold, Avg Unit Price, Operating Margin %

Dynamic titles: Title – Period, Title – Products, Title – Retailers

Calculated columns: Quarter, Month Short in Calendar/Date tables

4) Report pages & design

Page 1 — Executive Overview: KPIs, Retailer bar, Category bar, Date line, YoY trends.

Page 2 — Products & Retailers: Sales by Product, Retailer × Category matrix with conditional formatting.

Page 3 — Customers & Geo: Distinct customers, Map by State, City bars, High-margin donut, details table.

Drillthrough and Drilldown enabled. Slicers synced. Cross-highlighting applied.
